you should not paint directly over sealed concrete with oil-based floor paint. Sealers block moisture and absorption, preventing oil paint from bonding. The paint will fail to stick properly, leading to bubbling, peeling, and chipping soon after application. Reddit +3

Testing and Removing the Sealer

- **Perform a water drop test**: Pour a small amount of water on the concrete. If it beads up, a sealer is present and active. If it absorbs quickly, the concrete is porous enough to prep. YouTube · Bunnings Wareho…
- **Strip or grind the sealer**: You must remove the existing sealer completely using a chemical concrete stripper, sanding, or mechanical grinding so the paint can make direct contact with the porous concrete. Brad the Painter +1

Surface Preparation and Painting

- **Etch and clean**: Wash the bare concrete with a specialized concrete cleaner or etcher to open up the pores.
- **Rinse and dry**: Pressure wash the surface thoroughly and let it dry completely for at least 24 to 48 hours.
- **Prime and paint**: Apply a masonry-specific primer, followed by thin, even coats of an oil-based porch and floor enamel (such as an alkyd or polyurethane floor paint). YouTube · Bunnings War… +4
